WOOD SIDING THAT LASTS A LIFETIME

The Choice You've Always Wanted

Timberthane Siding delivers the warmth, beauty, charm, and the value-enhancing properties of real solid wood siding without the upkeep. Other wood siding products may claim similar results, but only Timberthane Siding can deliver on its promise. Glance through this brochure at some projects and visualize what it feels like to come home to Timberthane Wood Siding.

WHAT IS TIMBERTHANE?

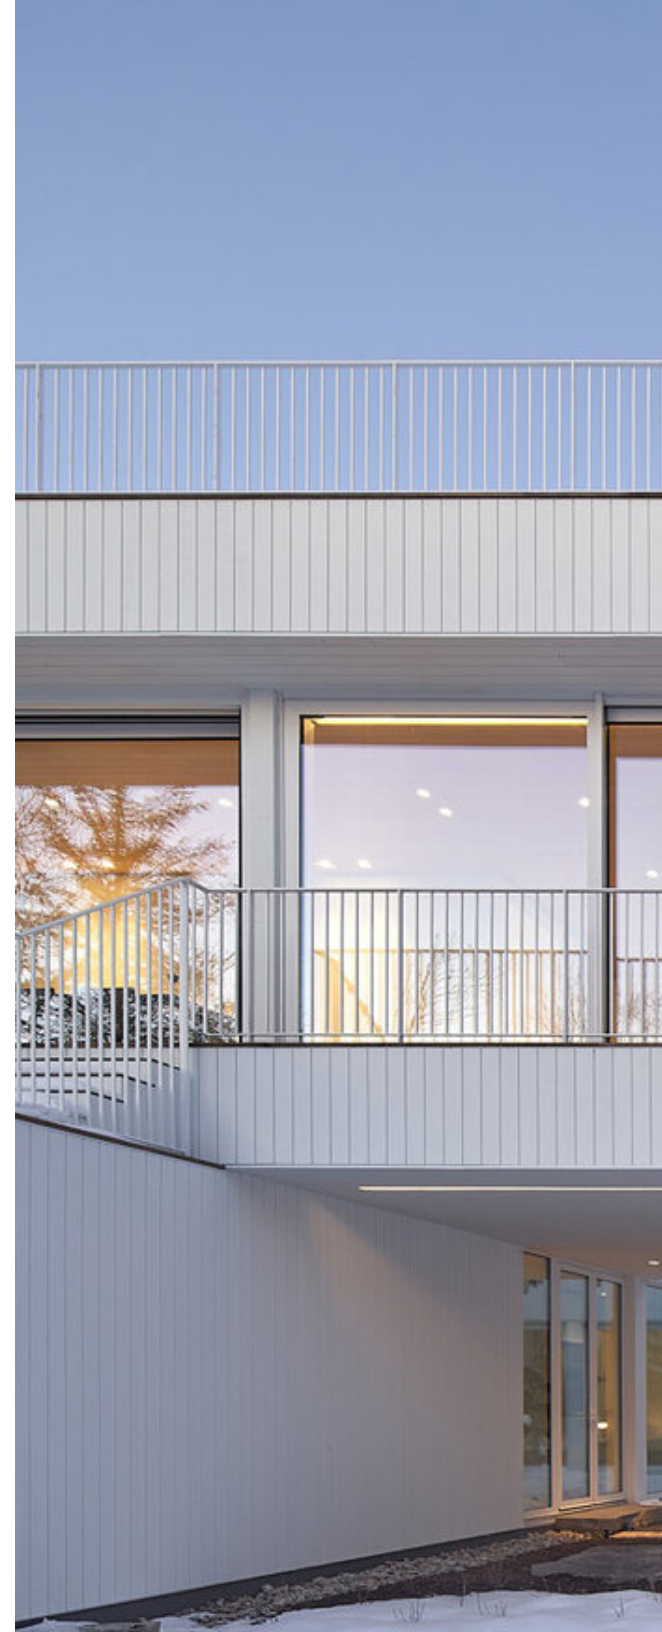

Timberthane is a 2-part polyurethane coating that gives our wood siding a protective shell and vibrant colouring. Timberthane completely encapsulates each piece of siding, making it resistant to water, UV rays, mold and abrasion. Timberthane is the most technologically advanced siding on the market, and we are proud to be the only manufacturers of this top-quality product.

WHY DO I NEED IT?

Unlike Timberthane, latex paint siding has a very short lifetime. Due to being water-based, it's very easy for the paint to fade, chip and peel. Over time, your once-vibrant siding will start to look dull. Choosing Timberthane means less work for you and more quality time spent with friends and family. Timberthane contains UV inhibitors that makes it less susceptible to fading and discolouration so your house stays bright and fresh looking for years to come without the hassle of yearly maintenance. Timberthane is created when multiple polymer coatings work together to cure and create a durable, resistant shell.

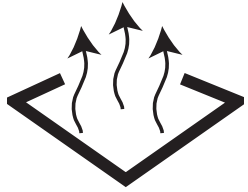

HOW DOES IT BENEFIT ME?

Along with being the highest quality, our siding is backed by a comprehensive warranty. Timberthane is one of the best investments you can make in your home. It will keep your home looking new while enhancing its overall value. Other lower quality sidings will weather and depreciate, costing you more time, money, and hassle in the long run. Do yourself a favour and choose Timberthane the first time.

PEACE OF MIND

Your home and property should be your refuge, your pride and joy. We are driven by passion to help create your piece of paradise and make it worry-free for many years to come. This passion will be obvious as you read about our highly-advanced technology, extensive warranties, and reliable customer support team to make your experience a breeze.

A COLOUR PALETTE FOR EVERY TASTE

Come to our brand new, state-of-the-art Colour Consult room and begin your colour selection journey with our Colour Specialists. You can make a colour, choose a colour, or bring in a colour swatch – we can match it! Timberthane also offers a Standard Colour Guide that helps make the decision-making process easier. These colours are carefully selected and based off trending and timeless colours. Let's begin selecting the colour of your dreams today!

ONE STOP SHOP

We have all the bases covered. Take trim, for example. Everyone supplies trim but only Timberthane can custom coat any shape and profile of trim that you, your architect or designer can dream up. We can also coat cedar shake in our special Timberthane coating so you can fully customize the complete exterior of your home.

YOUR PREFERENCE, YOUR WAY

Timberthane Siding is unique to any other siding on the market. The compelling attributes that Timberthane offers allow the end consumer to have complete customization to their particular liking. Full customization from start to finish includes: custom profiles, custom sizes, and custom colours - We can do it all. Picture it now, your own exclusive profile, size, AND colour. Talk about one of a kind.

THE ADVANTAGES

THE POLYMER ADVANTAGE

At first glance, polymer coatings look much like ordinary paints. But they are completely different in terms of how they perform. Paints simply dry, whereas polymers cure chemically; they form a protective shell that is far tougher than any paint. Look closely and it becomes apparent right from day one that Timberthane Siding is far more robust. Over time, this polymer advantage translates into an astonishing performance difference. Our coating uses the same polyurethane mixtures that are contained in marine-grade and industrial finishes – talk about durable for the extreme Canadian summer and winters!

BONUS! Each order comes with a touch-up paint kit. This allows you to touch up your cut end pieces to ensure a full seal around your board for maximum durability.

THE SEAMLESS ADVANTAGE

Timberthane goes the extra mile to provide high-end details that will make your siding journey trouble-free. First, every order is supplied with colour-matched coated nails to ensure a seamless look. This will provide the high-end finish you are looking for. Second, every board comes end-matched. End-matched boards allow you to fit your next board in place seamlessly and quickly. This helps decrease the possibility of movement in the boards over time. End-matching also saves you time, labour, and reduces your total waste during installation, which makes it simpler and more efficient.

THE TECHNOLOGY ADVANTAGE

Timberthane siding has a very complex formula that gives us the remarkable results we see today. However, in short, the revolutionary Timberthane coating uses two primary technologies. First, the formula contains ceramic nanospheres, yielding a phenomenal difference in protection against impact, abrasion, and erosion. It's this toughness that can withstand the UV's that cause fading, and the rainfall that can cause rot. Second, Timberthane coating uses an antimicrobial agent, offering protection against bacterial attack – a major cause of siding failure.

THE WORRY-FREE ADVANTAGE

Temperature extremes and freeze-thaw cycling play havoc with ordinary pre-finished wood siding because paints and stains are porous; the wood swings from sopping wet to tinder dry with the passing seasons. Timberthane forms a membrane around the wood that lets it breathe while controlling the moisture content at optimum levels. This “shock absorber” technology is exclusive to Timberthane. So, don’t fret about your siding during these harsh weather swings, Timberthane is solid.

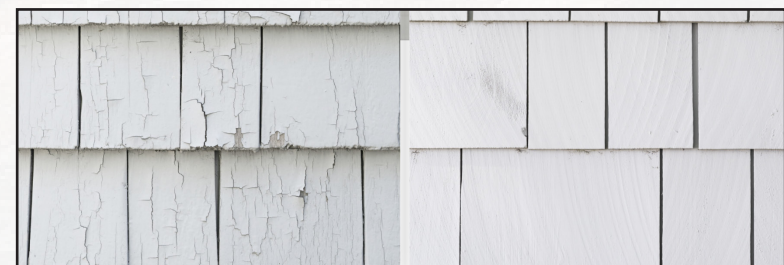

THE SECURITY BLANKET ADVANTAGE

Timberthane offers a substantial warranty. We stand behind our product and we are confident you are going to love it. See our website at www.timberthane.com/resources for more information regarding our warranty and best practices.

THE SUBSTRATE ADVANTAGE

Since we are using the most advanced coating on the market, it only makes sense to use the best substrate underneath. That’s why we specifically use furniture-grade Eastern White Pine, often called the “King of Woods,” and gently kiln dry it to 8-12% moisture content for optimum stability. Timberthane coating is applied with an advanced production machine that uses high-pressure spray guns that achieve an equal and even coating on all boards.

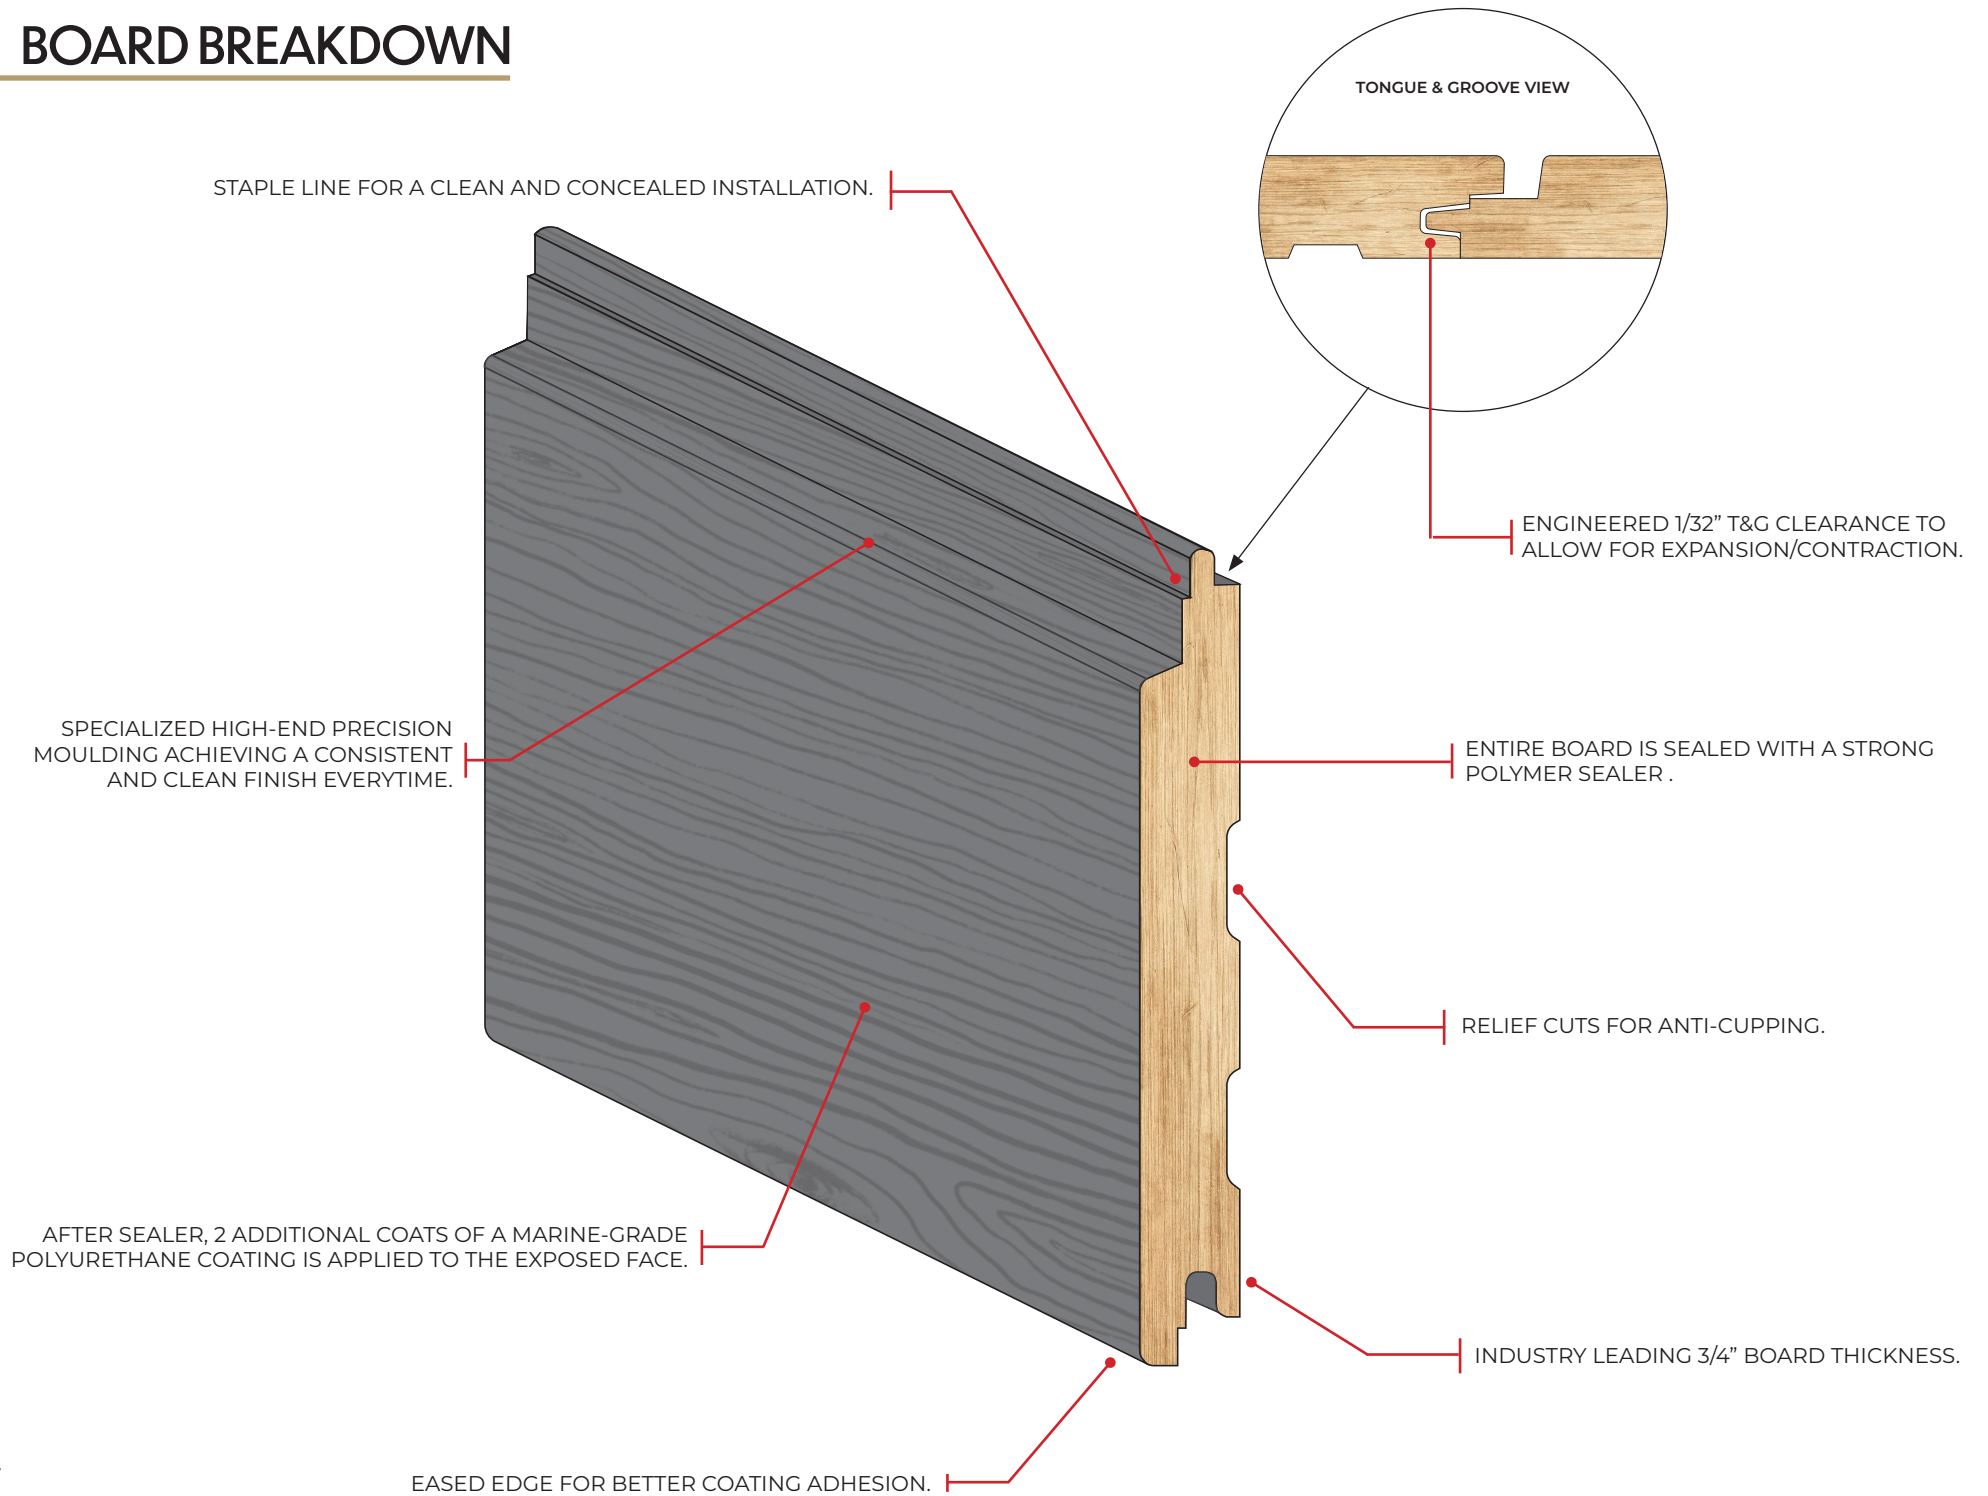

DEFY THE ELEMENTS. DEFY TIME.

COMPETITOR - LATEX PAINT

TIMBERTHANE - POLYURETHANE FORMULA

BOARD BREAKDOWN

COATING SUMMARY:

- MARINE GRADE POLYMER
- RESISTS FADING, CHIPPING, AND DECAY
- BREATHABLE COATING
- SLOWER ABSORPTION AND RELEASE OF MOISTURE MAKES FOR A MORE STABLE STRUCTURE
- ANTI-MICROBIAL ADDITIVE REPELS MOLD AND MILDEW
- CONTAINS CERAMIC TO RESIST SCRATCHING, CHIPPING, AND STAINING
- PACKED WITH UV INHIBITORS SO SIDING WON'T FADE LIKE PAINT
- RESISTS WEATHERING AND DESTRUCTIVE ELEMENTS

100% CANADIAN

The wood used to fabricate Timberthane is kiln-dried and precision moulded so we can ensure the highest quality prefinished siding, guaranteed to withstand our Canadian climate. We process the lumber from beginning to end, here at Muskoka Timber Mills, in our 10,000 square foot state-of-the-art finishing room.

Standard Timberthane orders are manufactured with 1,2 common contractor grade white pine. Elevate your Timberthane order to thermally modified pine or western red cedar for the following advantages:

- For even longer longevity
- For future generations
- Additional durability and stability

LET'S GET STARTED

Timberthane Siding is conveniently available in eight standard patterns, consisting of both vertical and horizontal applications. Choosing a pattern for your project is a matter of taste. You can even go a step further and design your own profile. With our specialized, high-end precision moulding, we can create any siding look/profile you can dream of. Check out our Profile Dimension Guide at www.timberthane.com if you are interested in learning more about the dimensions and specifications of each profile listed below!
